

Bear

PROJECT

ESTIMATED ASSEMBLY TIME 3 HOURS

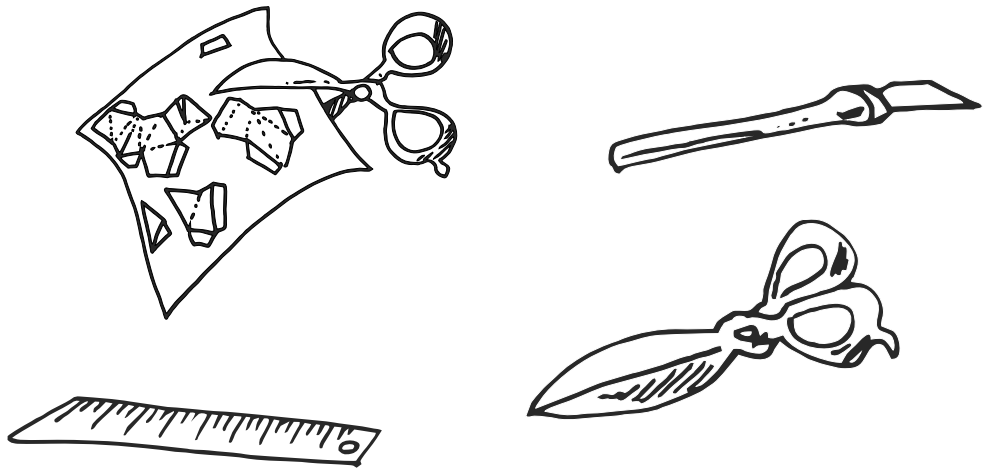

Assembled size on **A3** paper sheet: 235 x 186 x 300_{mm} (9.25 x 7.32 x 11.81_{in}) - 17 parts

For best result, print out on 160 g/m² (32 lbs/m²) cardboard.

Cut

Cut out the parts along the solid lines. If there is an inner part, cut that out then move to the exterior.
I find a good way to cut is to hold a ruler to the straight edges and follow the ruler with an Exacto knife. Alternately, if you have very small medical scissors, you can use those.

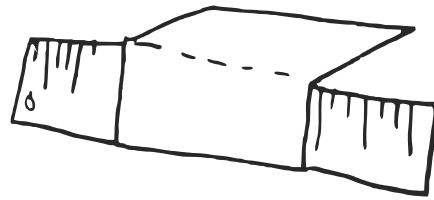

Fold

Fold the tabs according to the dots. There are two different types of folds, mountain folds (up) and valley folds (down). Their names describe their outward or inward orientation.

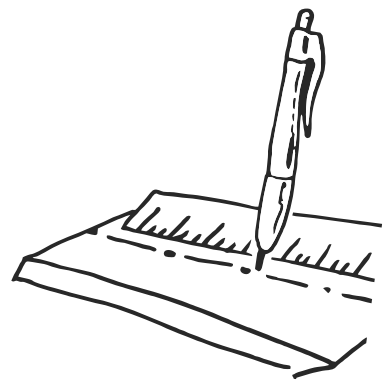

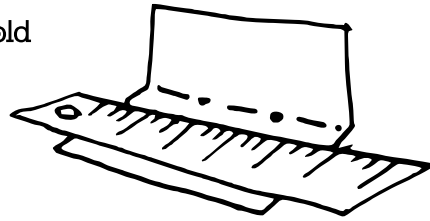

A good way to get nice, clean folds is to mildly score the tabs with a ruler and empty pen, then pick up the piece and fold along the ruler.

Although scoring the folds with a pen seems unnecessary, it makes the final pep come out 100% better because the folds are perfect lines.

mountain fold

valley fold

Glue

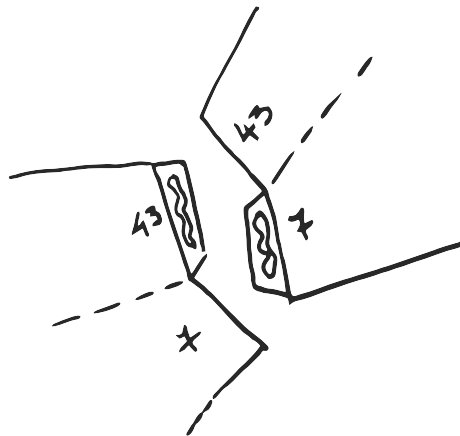

You will now need to glue all the pieces together. To do this, I like using Loctite super glue because it's precise and quick drying, but hot glue is an alternative. The problem with using hot glue is that it takes a little longer to dry.

Assemble

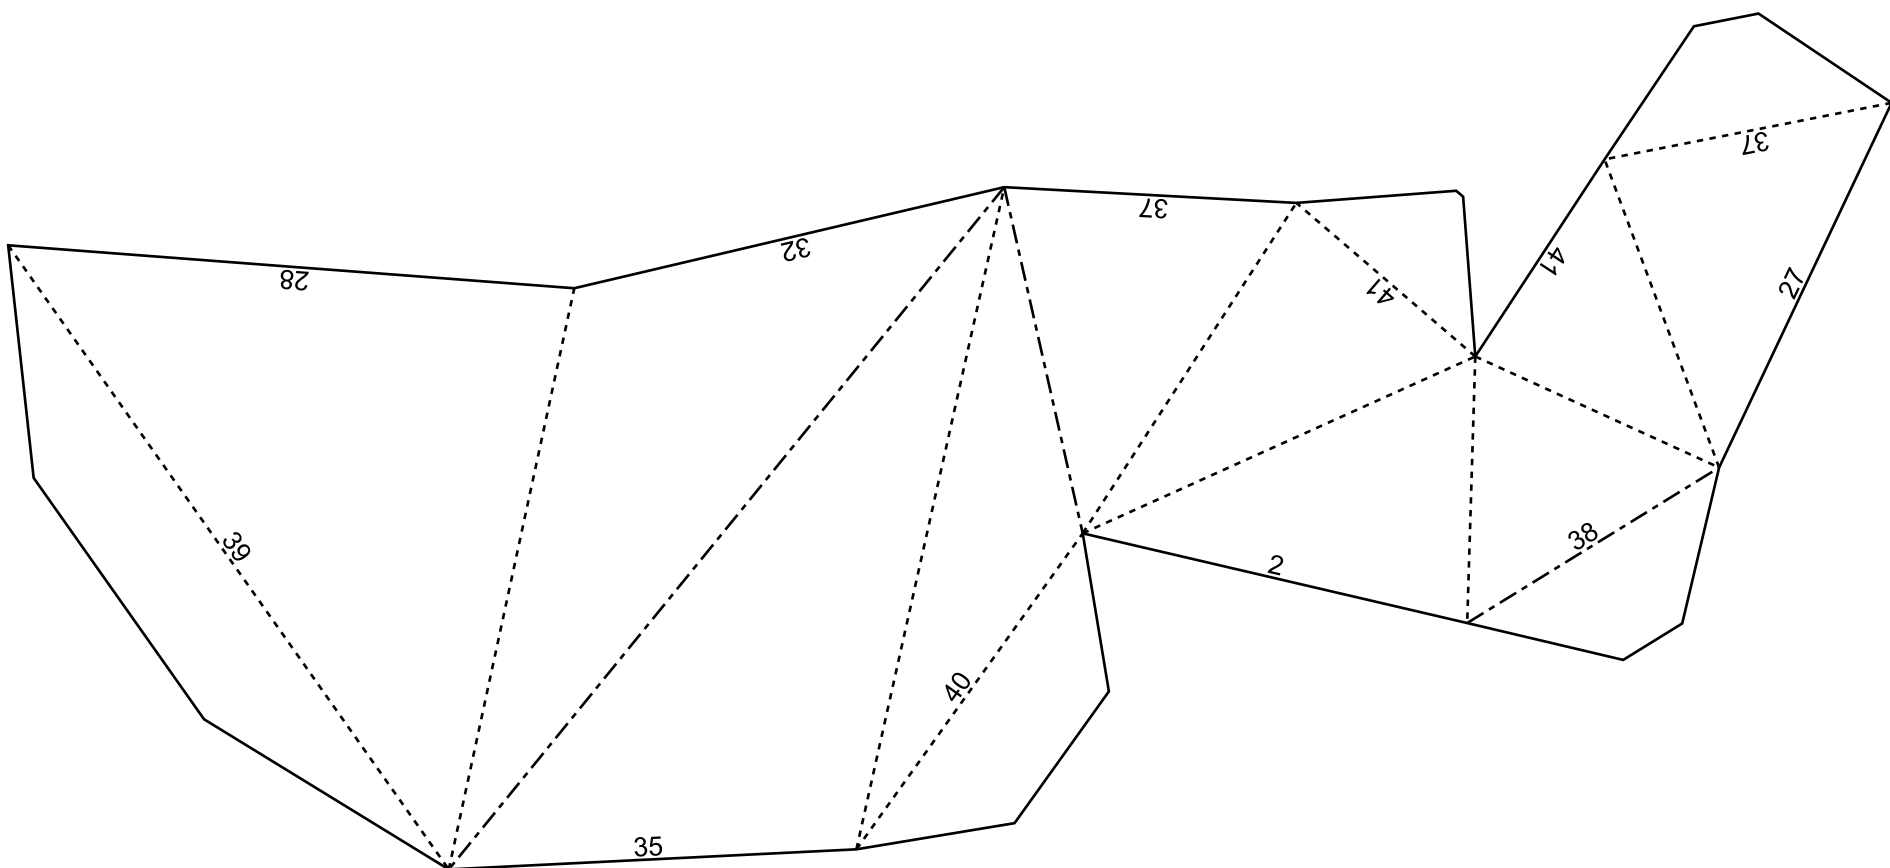

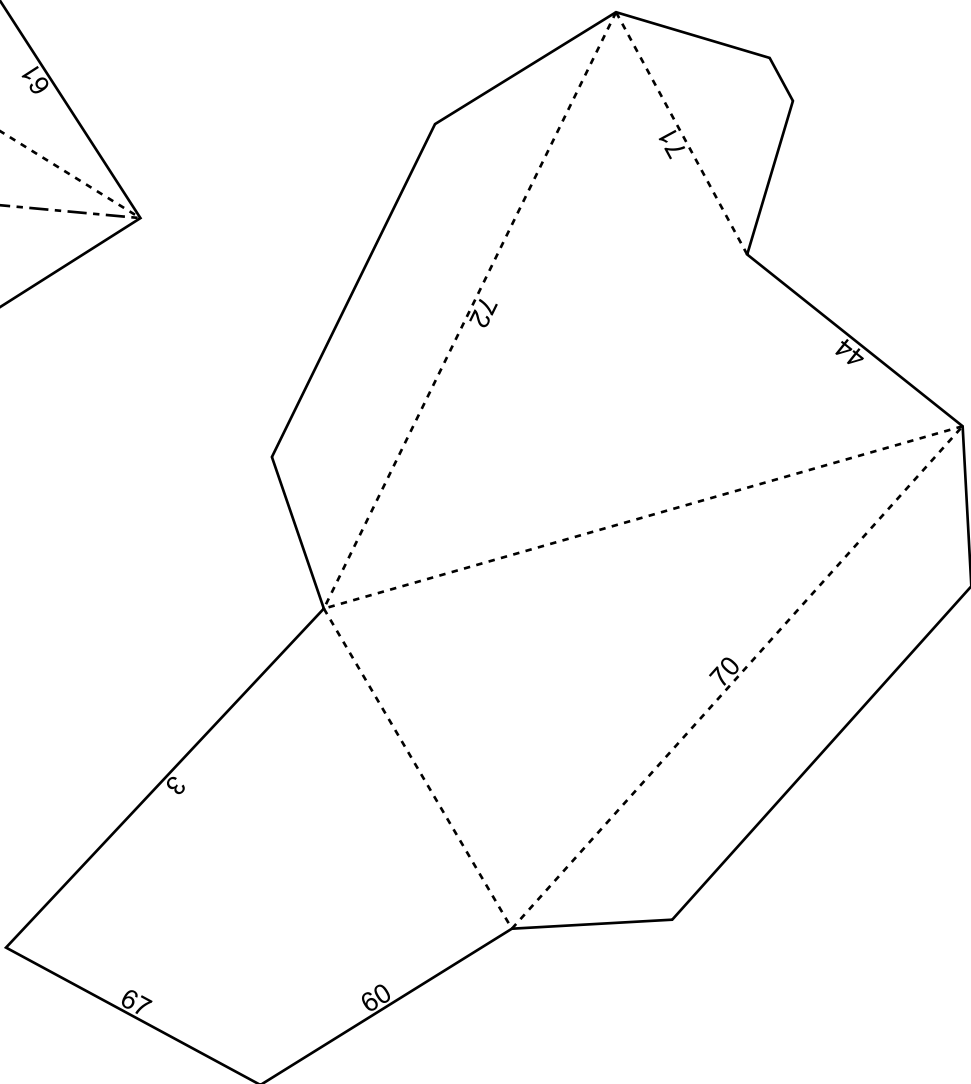

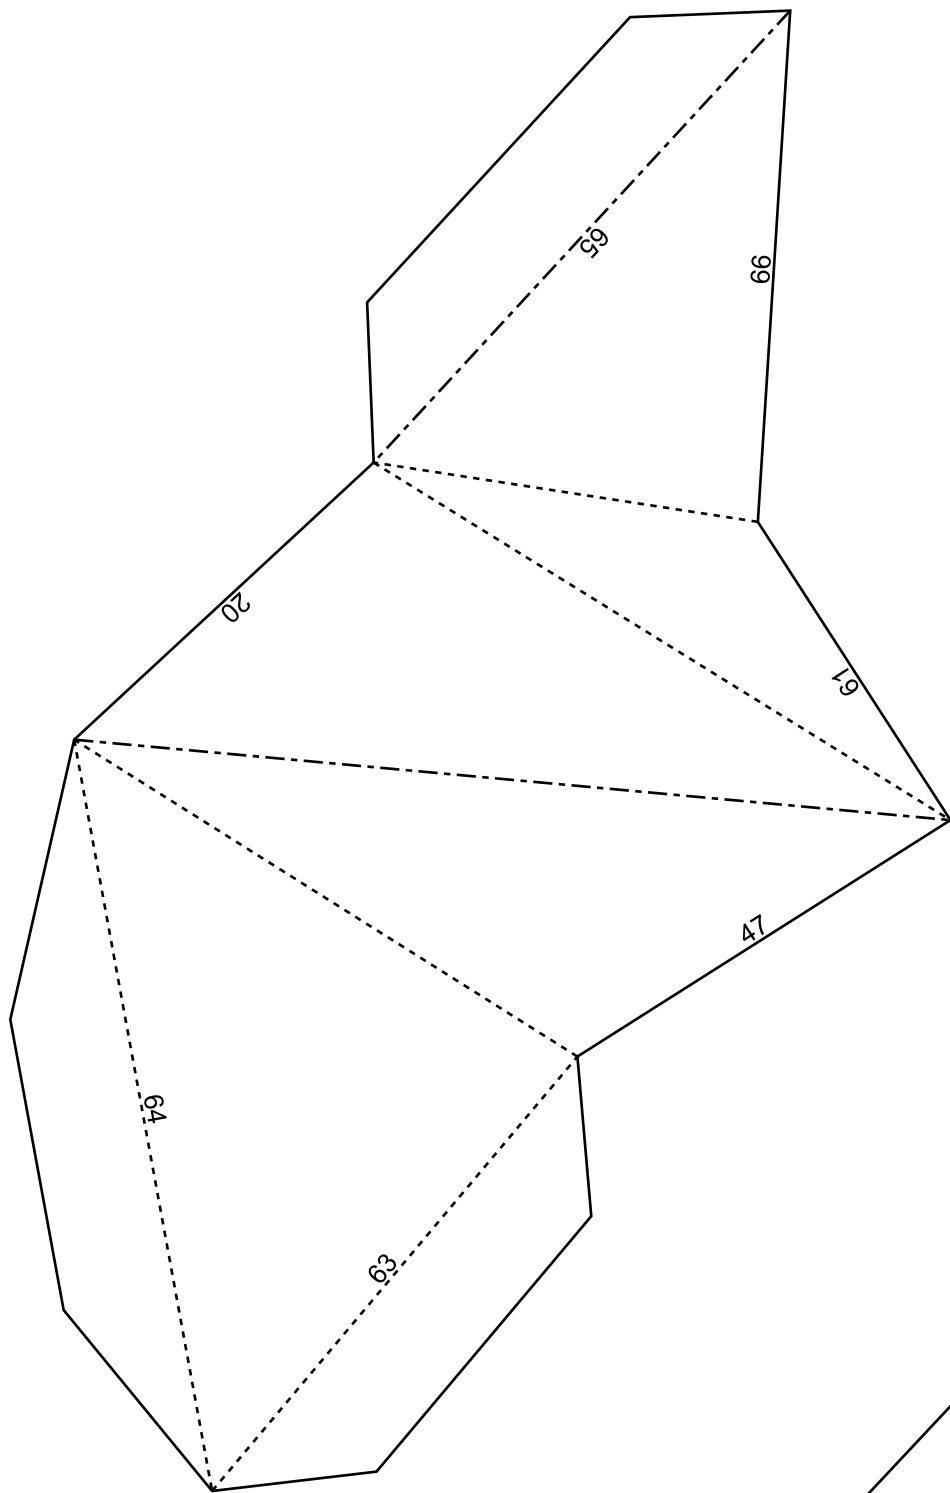

Line up the number on the tab to the exact same number on the other side.

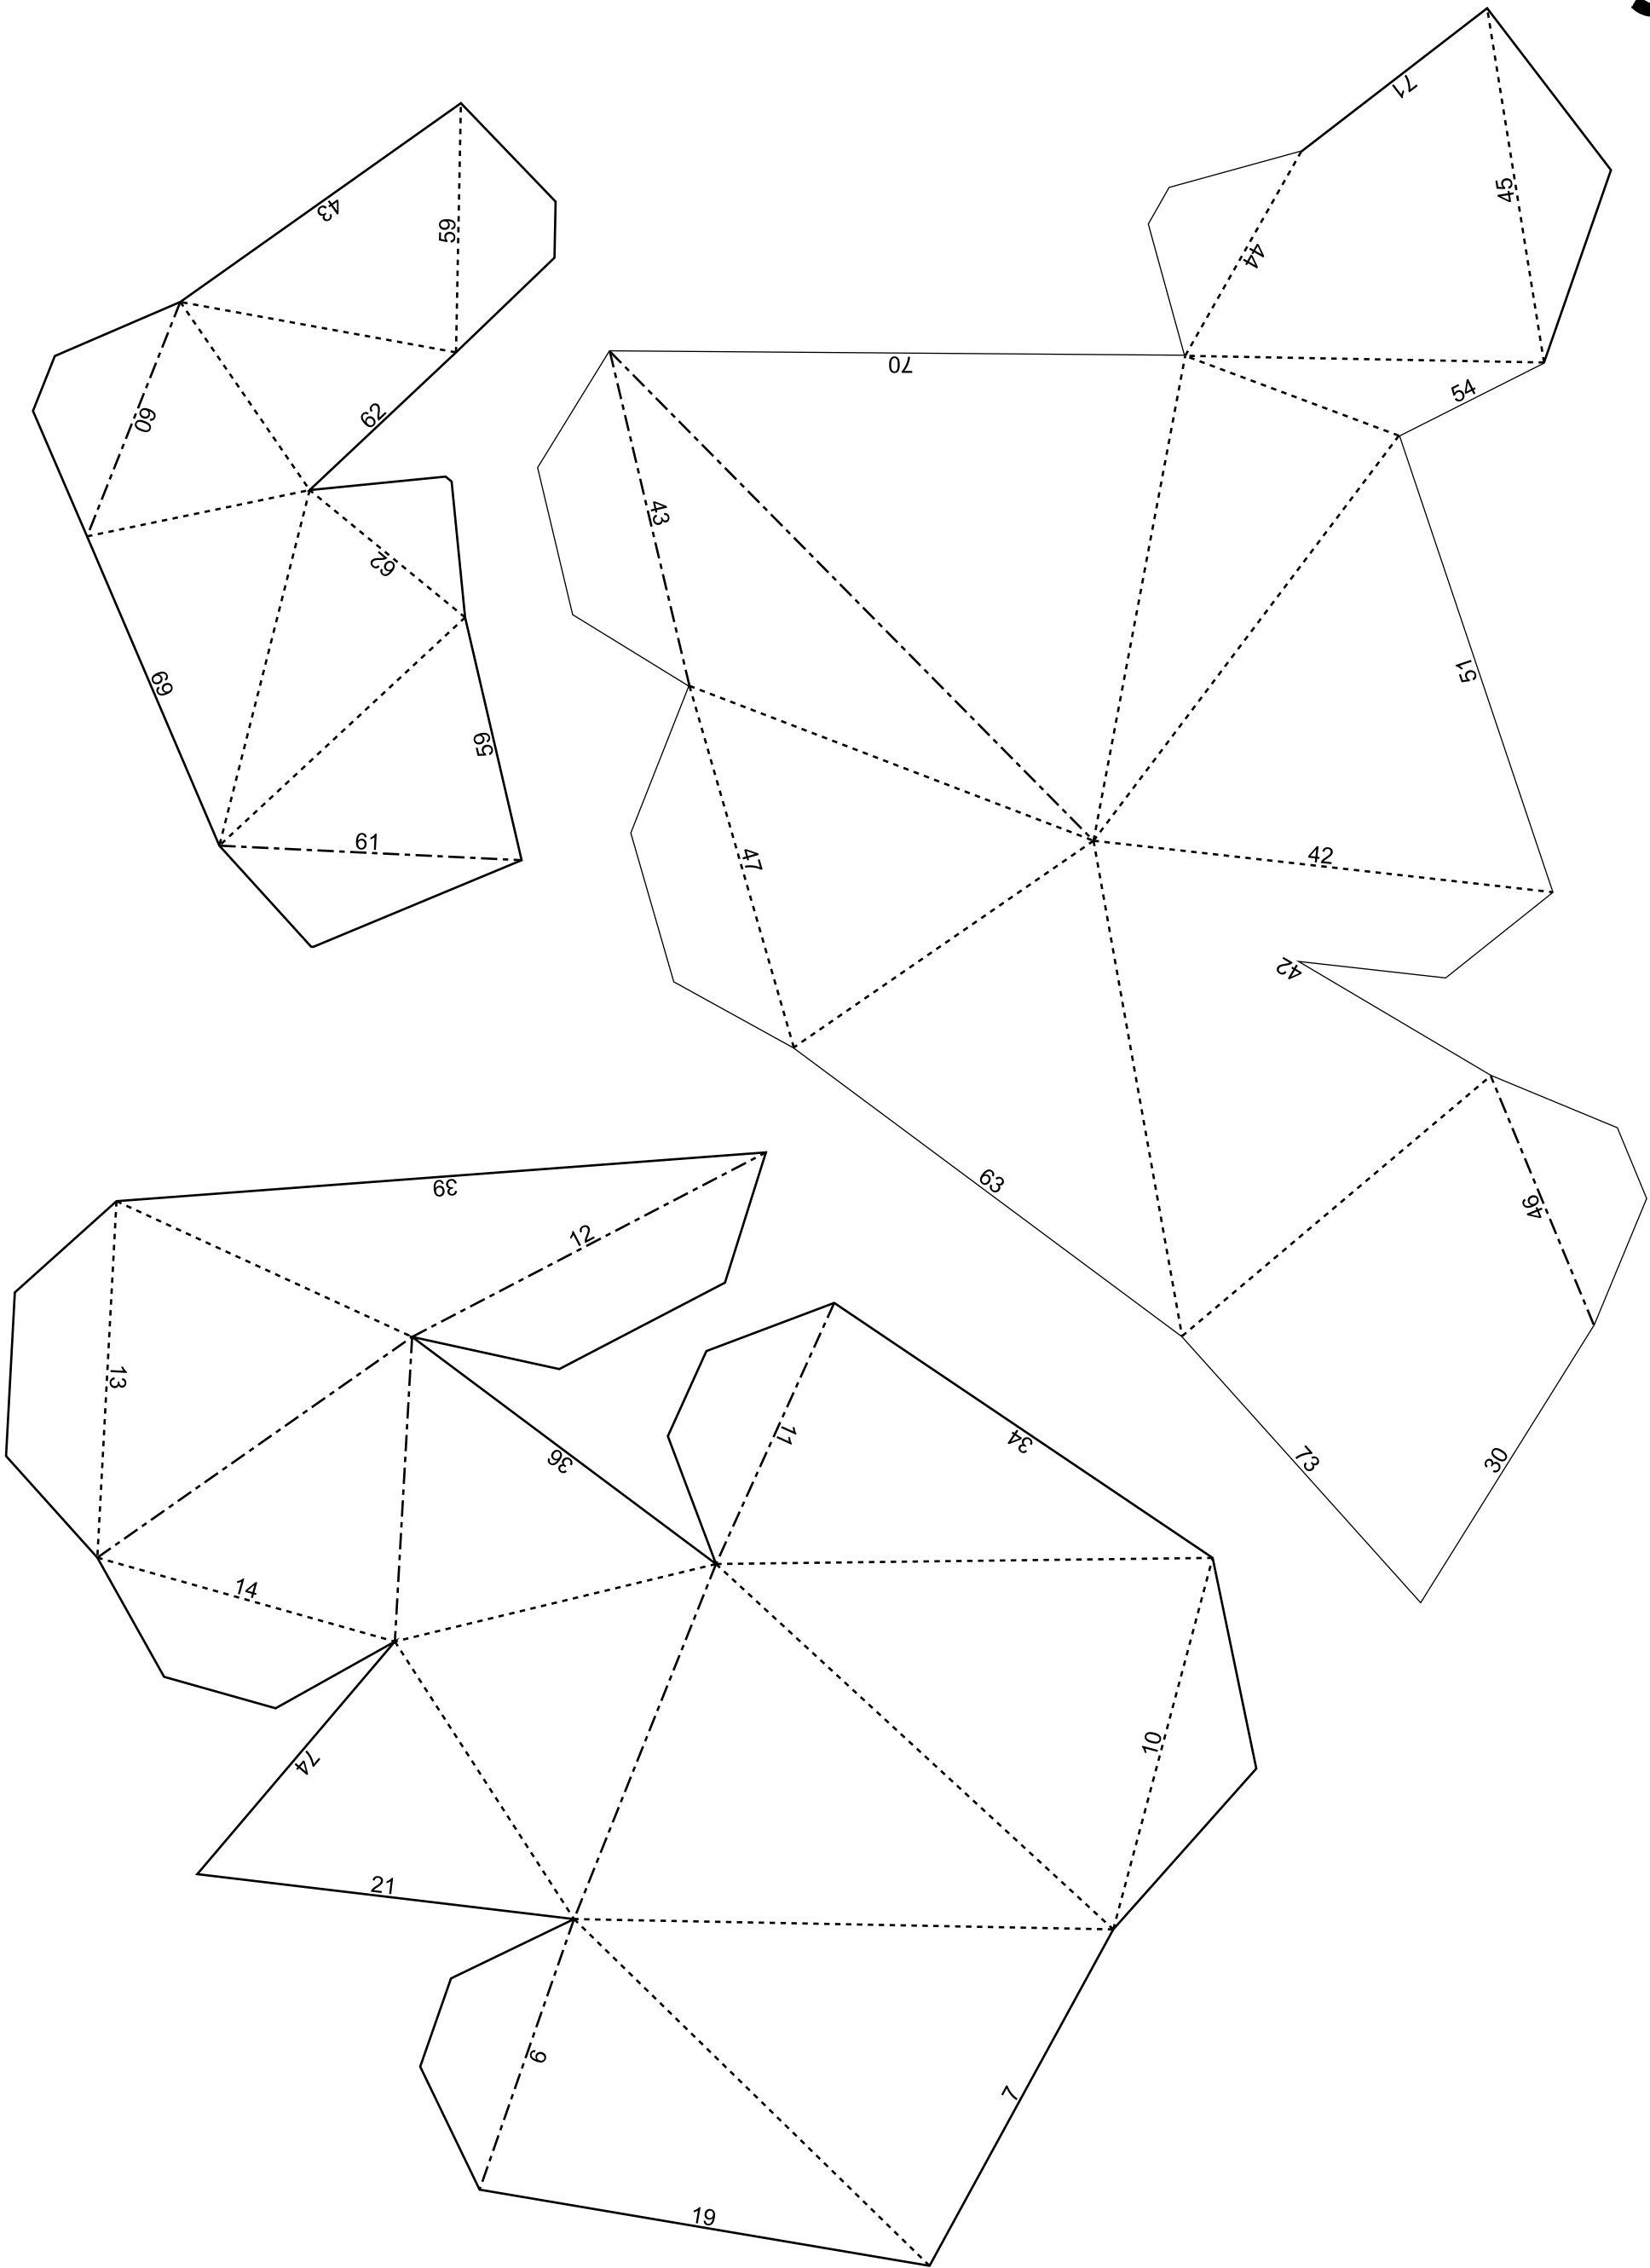

They are not chronologically numbered. You may start anywhere you want.

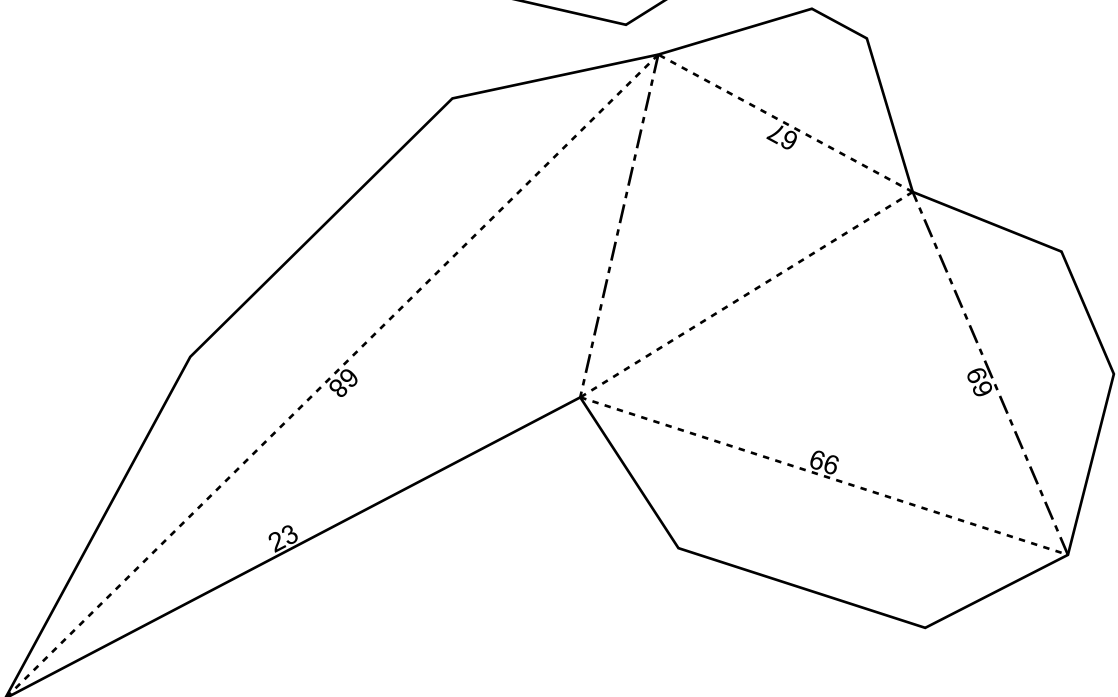

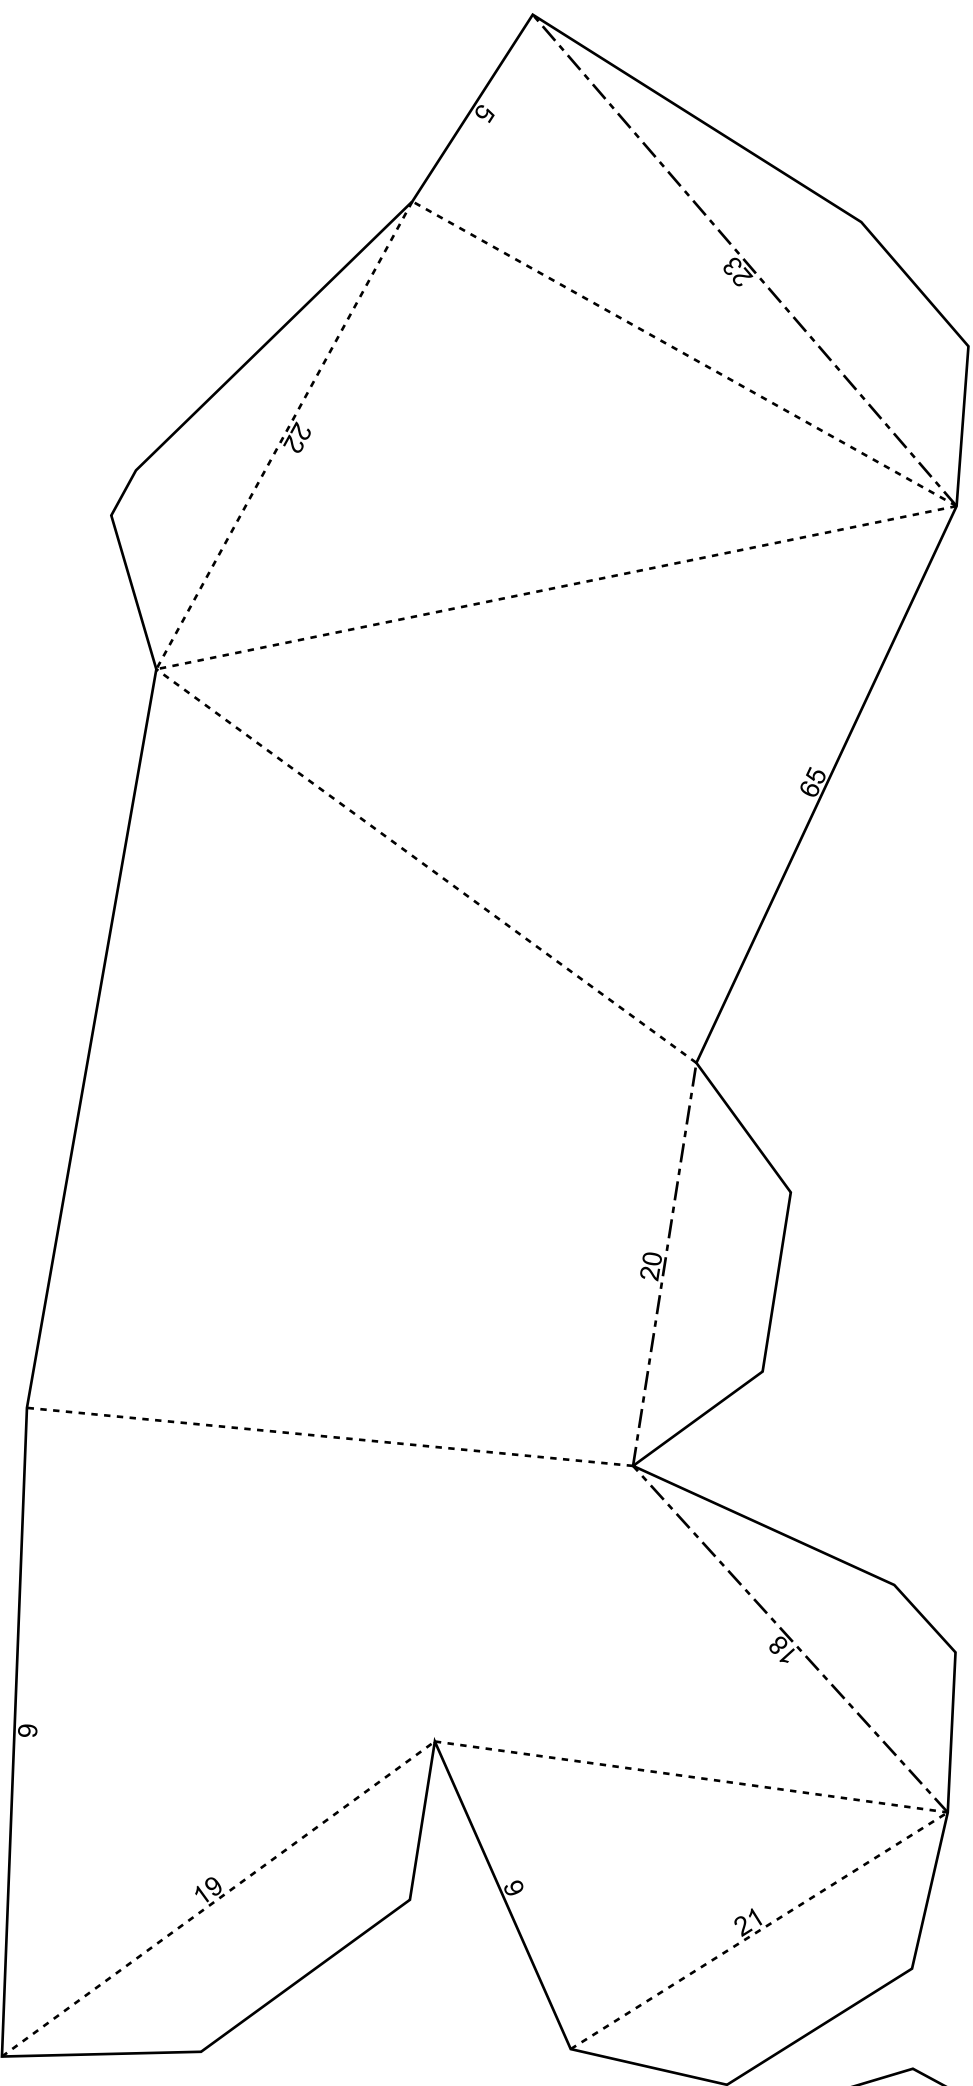

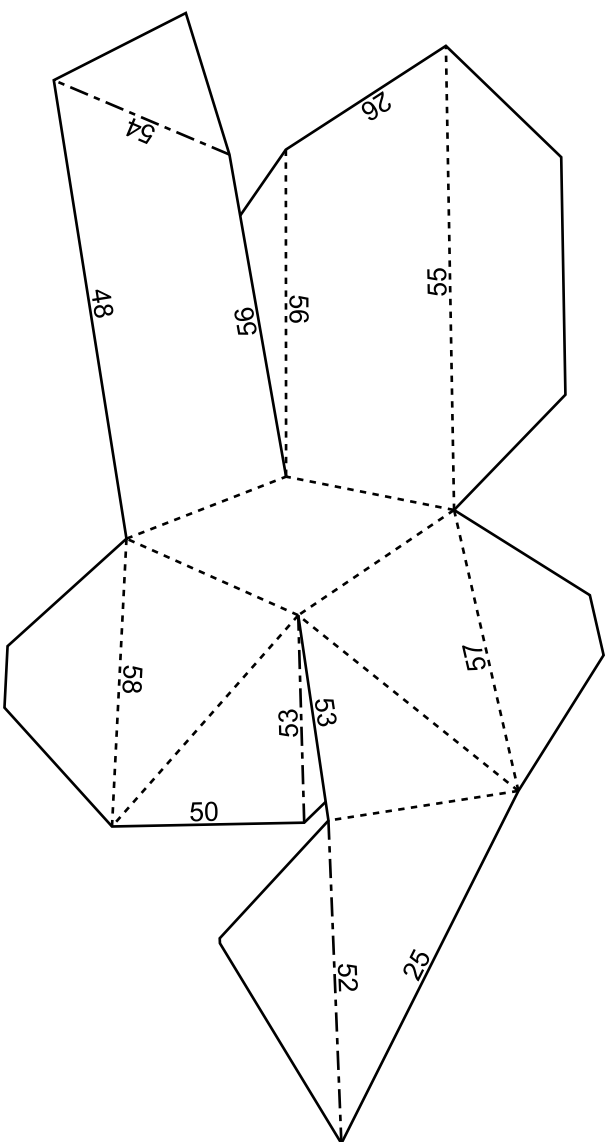

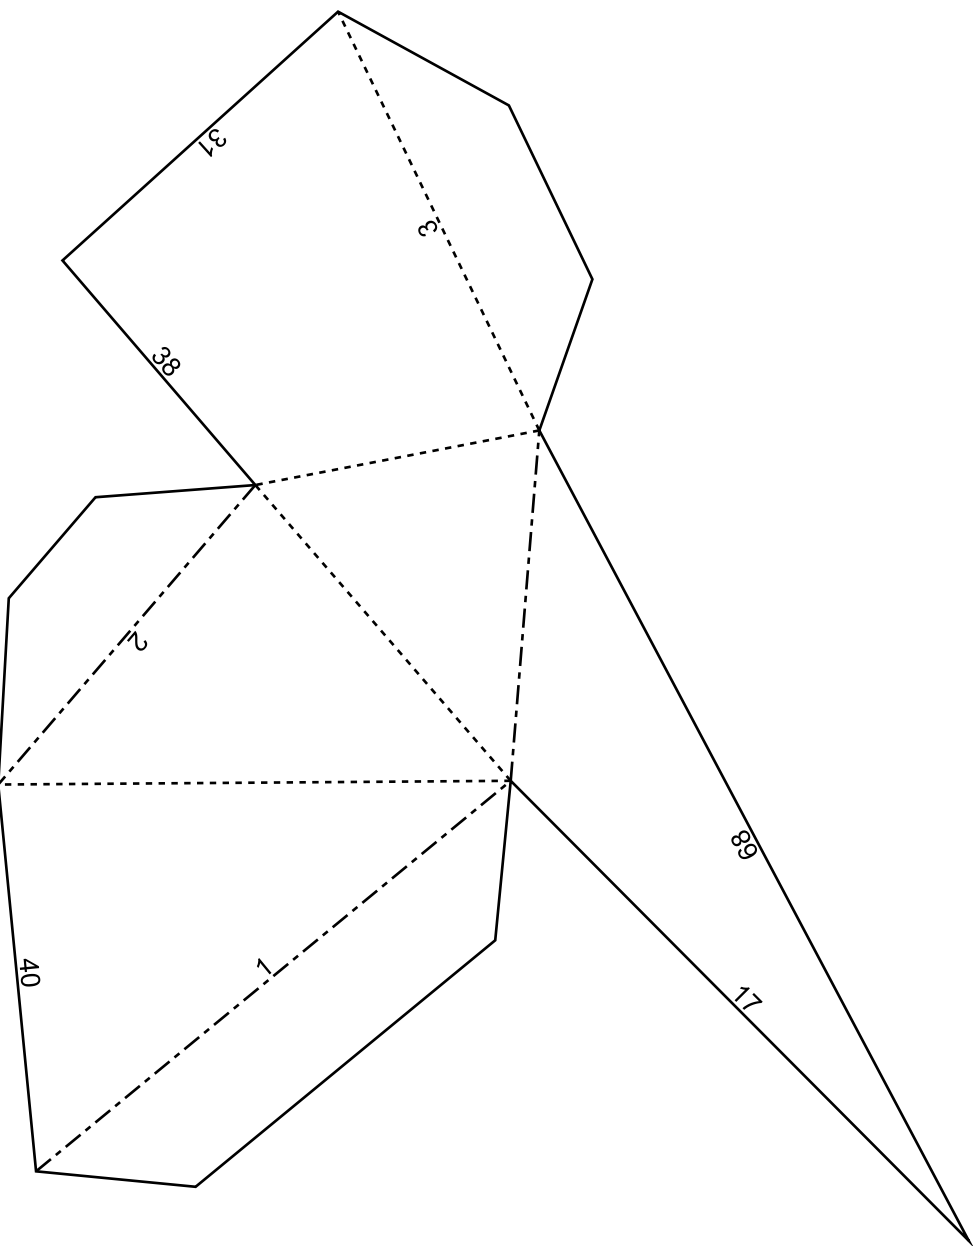

TIPS

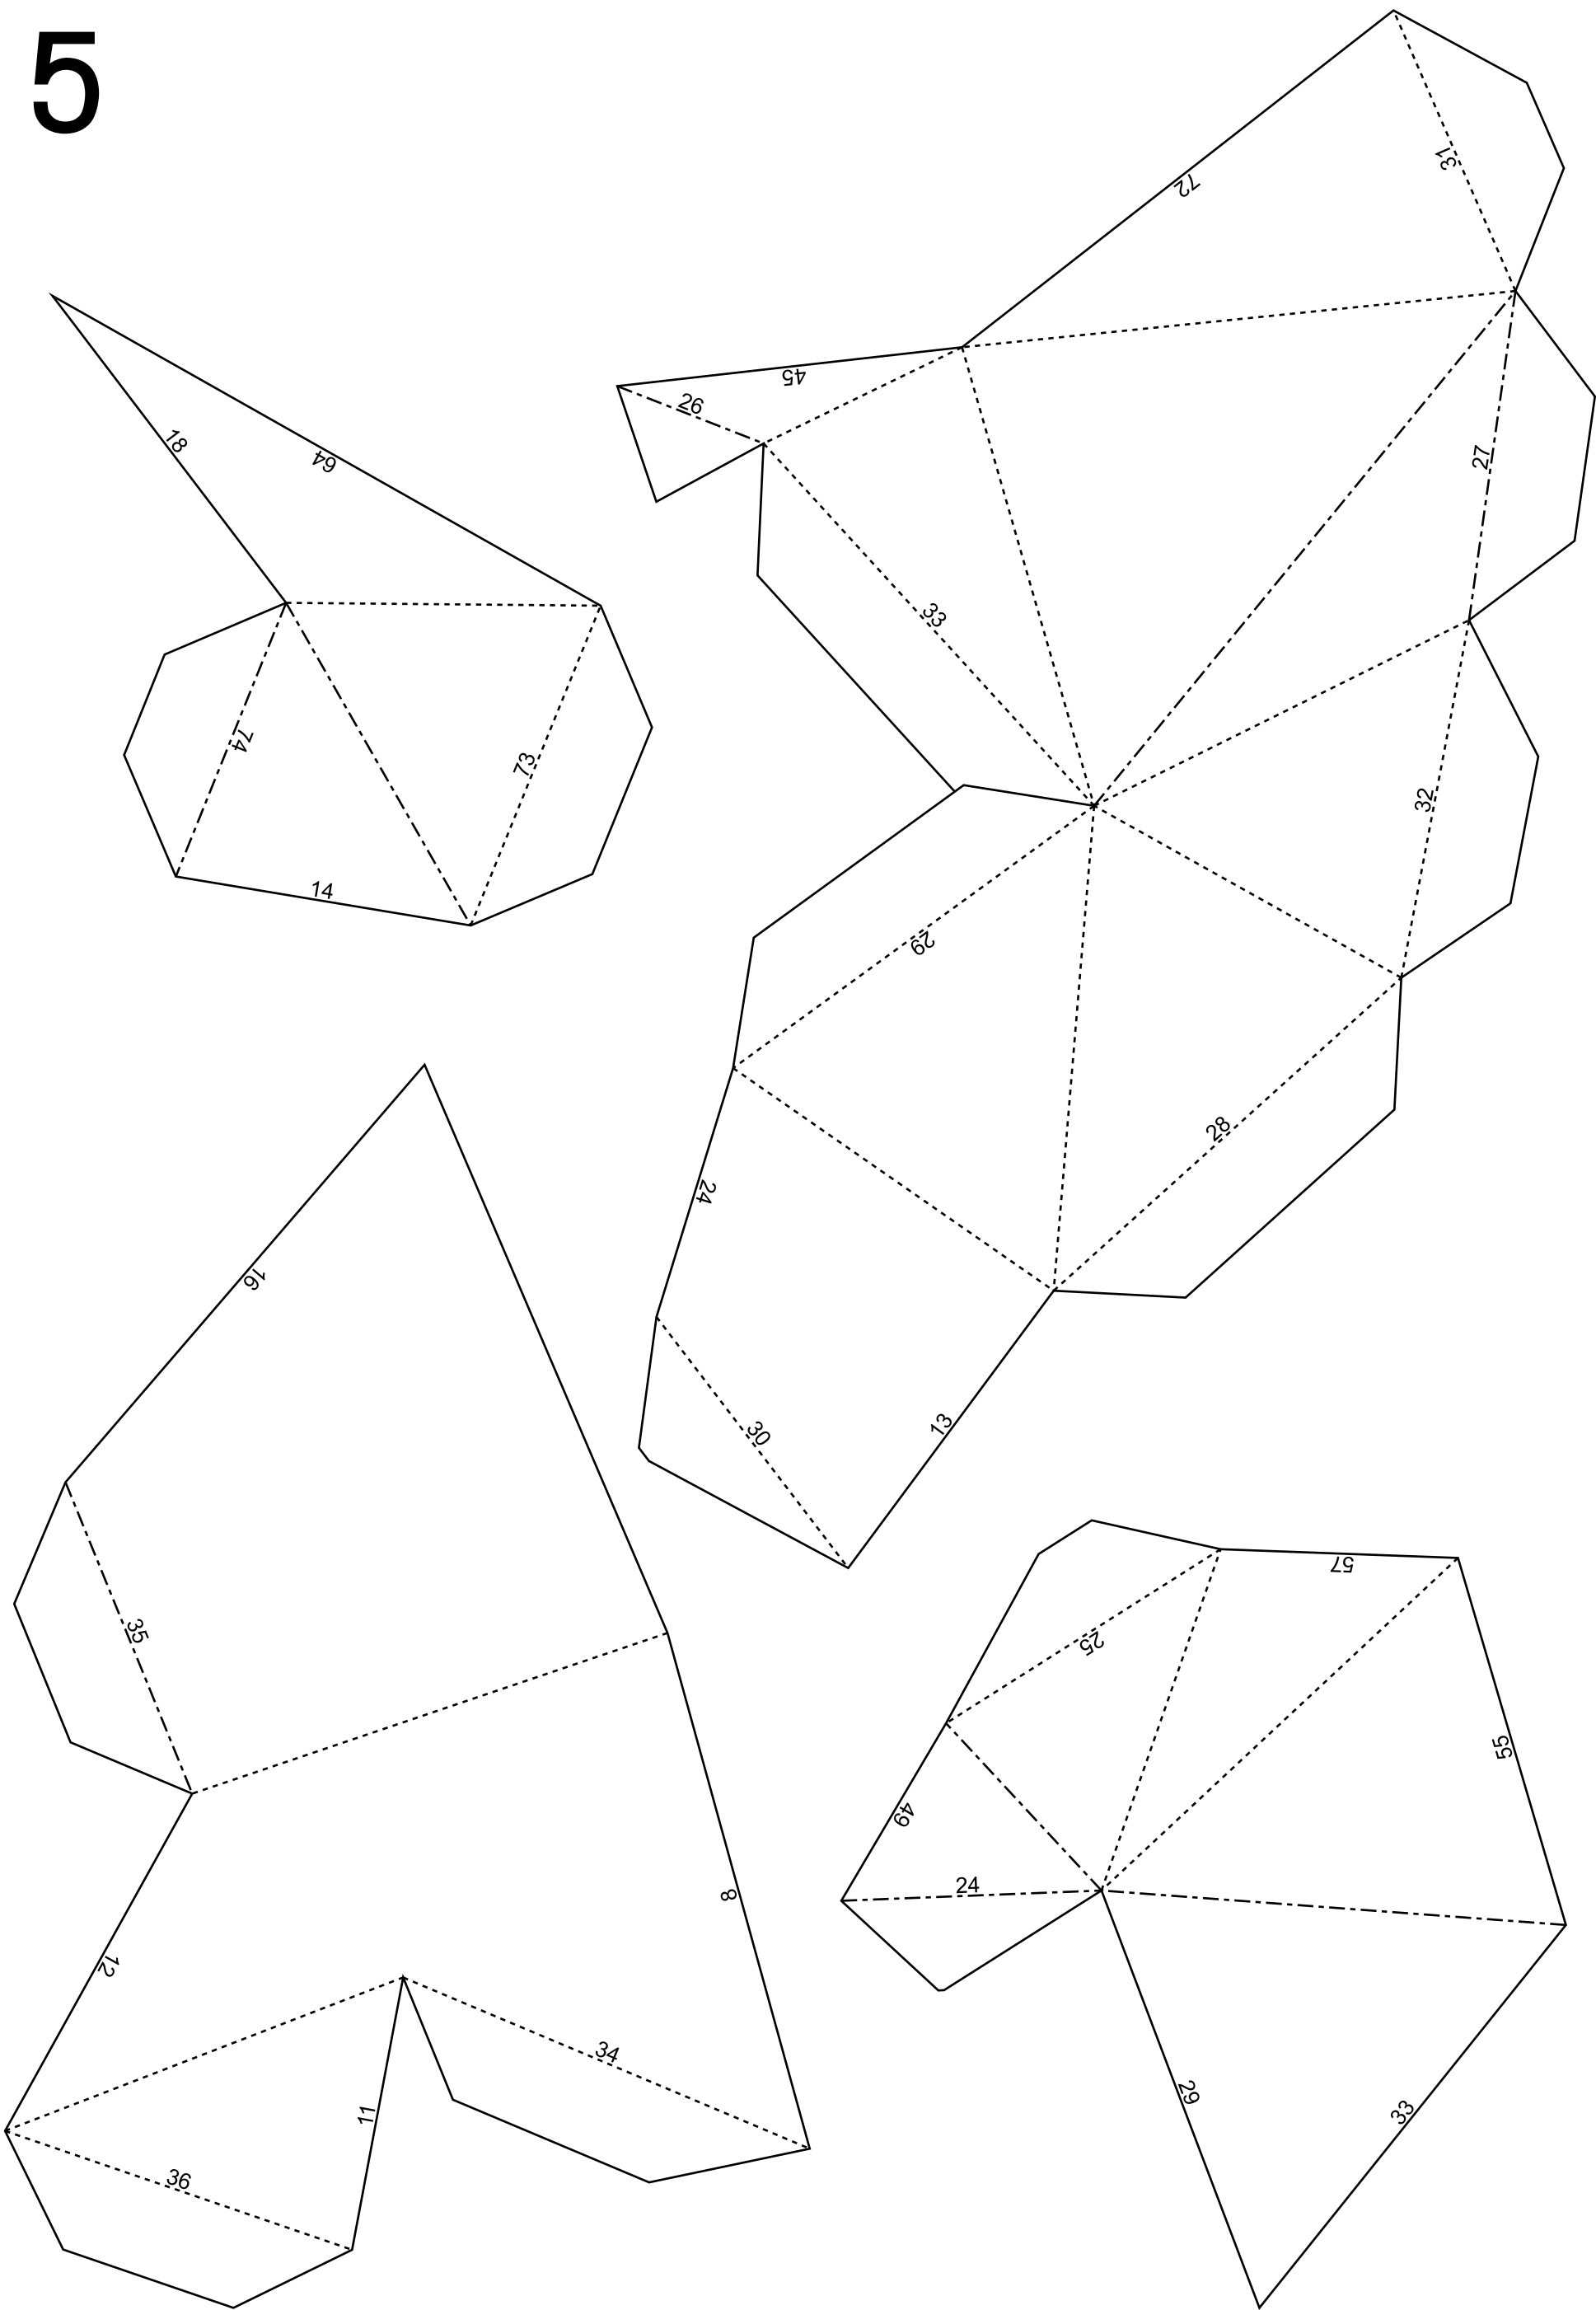

- Use a thin layer of glue to avoid wasting glue and other stuff....like your skin.
- Have a designated space for your work, it can (and WILL) get messy at times.
- With VERY TINY pieces, a pair of tweezers is recommended to fold.
- Don't rush things up. Be as careful and exact as you can, especially while cutting and folding.
- Have a piece of cloth next to you at all time to clean the excess glue.
- Practice with little projects if you aren't ready for a big job.
- Patience is key!
