# AIR BLADETM AIR KNIFE

# SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE

Blowoff, clean, cool and dry with this quiet, sharp and strong focused curtain of air

### WHAT ARE THEY - REASONS TO USE

The Silent X-Stream™ Air Blade™ Air Knife is easy to mount and maintain, reducing both compressed air consumption and noise levels. It is the most efficient design yet achieved in Air Knife blow off technology in reducing noise levels and air consumption yet providing the optimum in blow off energy.

The Silent X-Stream™ Air Blade™ Air Knife produces a "laminar" flow of air along its length using the "Coanda" effect which "entrains" a large volume of air from the surrounding area along with a small amount of compressed air from the X-Stream™ Air Blade™ Air Knife to produce an output flow up to 40 times.

System payback on compressed air savings can be as soon as a few weeks in some applications.

The Silent X-Stream™ Air Blade™ Air Knife comes in three versions: Gold Anodized Aluminum for most applications, Hard Anodized aluminum for abrasive environments or where material may come in contact and tend to wear against the air knife, and stainless steel for high temperature and corrosive environments.

**NOTE:** Plastic shims can wear out quickly in Air Knives if the air is not clean. Nex Flow™ uses ONLY stainless steel shims.

**Available in Hard Anodized aluminum for abrasive environments** or where material may come in contact with the air knife.

### SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE FEATURES:

- No moving parts Gold Anodized aluminum, Hard Anodized aluminum or stainless steel.
- Compact design, simple, lightweight and portable.
- Full flow Air across entire length of Air Knife.
- Air inlets at ends and back.
- Driven by air not electricity.
- Replaces drilled pipe and open jets or nozzles used for blowoff, cleaning, drying and cooling.
- High airflow amplification.
- Instant on-off, no electricity or explosion hazard.

### SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE BENEFITS:

- ▶ Longer life in difficult environments than competitive models.
- Lower compressed air consumption than drilled pipe or rows of open jets and nozzles.
- Can be placed end to end for continuous airflow.
- Maintenance free with output easily controlled, safe to

### SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE ADVANTAGES **OVER BLOWERS:**

- Compact design, simple, lightweight and portable.
- Driven by air, not electricity for safety.
- No moving parts Hence safer and maintenance free.
- Lower noise levels at 69 dBA and less with smaller space.

### SILENT X-STREAM ™ AIR BLADE™ AIR KNIFE APPLICATIONS:

- Cleaning of steel sheet in strip mills
- Parts drying
- Cleaning or drying web processes.
- Pre-paint drying and blowoff
- Scrap removal
- Parts cooling
- Circuit board cooling
- Use for environment separation with air curtain effect
- Opening bags for filling
- Sheet separation

### SILENT X-STREAM™ AIR BLADE™ AIR KNIFE VERSES OTHER BLOWOFF PRODUCTS:

- 1. Drilled Pipe Typically drilled pipe uses more compressed air while producing inconsistent flow at high noise levels. The Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife can usually cut air costs as much as 50%.
- 2. Flat Air Nozzles These products can use even more compressed air than drilled holes with the same problems of inconsistent flow at high noise levels.
- 3. Air Blowers are capital intensive but can use less energy than compressed air operated air knives on a continual basis. However blowers cannot be cycled on and off quickly and can actually use the same or more energy in intermittent applications. Choosing a blower or Silent X-Stream<sup>TM</sup> Air Blade<sup>TM</sup> Air Knife depends on the following factors:
  - (A) Availability of a particular energy source is electricity or air the most convenient.
  - (B) Space and Weight These are important factors that affect the overall cost and maintenance of a system. The compressed air operated Air knife is light weight and compact.
  - (C) Noise level The Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife is intrinsically quiet while blower systems are noisy and require costly silencing.
  - (D) Application particulars The specific application often determines what is best to use. Intermittent blowoff and/or tight spaces favor the use of the Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife.
  - (E) Reliability Blower systems require maintenance because they have moving parts. The Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife requires no maintenance when properly filtered and is intrinsically the most reliable.
  - (F) Energy Cost Energy cost can be less with a blower system especially on continuous blowoff applications. However, energy cost can often be offset against higher capital costs and maintenance costs when utilizing blower systems. The Silent X-stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife is low cost with negligible maintenance.
  - (G) System Cost Much higher for blower systems especially if silencing is required. It is low for Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knives.
  - (H) Maintenance and Operating Cost The need for maintenance of blower systems can be a strong negative in some situations, especially if the blowers or electrical systems are in harsh environments. The Silent X-Stream™ Air Blade™ Air Knife however is resilient to harsh environments in comparison

A special HDPE 24" plastic Silent X-Stream™ Air Blade<sup>™</sup> Air Knife was made for an environment that could not tolerate even stainless steel. The air gap was machined. The screws of the Air Blade<sup>™</sup> were covered by a separate HDPE strip.

A stainless steel 36" Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife blows off excess sugar from muffins prior to the oven to avoid burning. A Model 90009 Regulator with gauge sets the ideal pressure and flow.

**≈NEX FLOW**™

Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife - Compressed air enters the Air Knife at the rear (or end) ports at (A). Air is entrained at point (B) and (D) by the compressed air stream that leaves the Air Knife from a small gap at point (C). The entrained air follows the profile that directs the airflow in a perfect straight line to create a uniform sheet of air along the entire length of the Air Blade<sup>™</sup> Air Knife. The amplified air stream maximizes velocity and force is maintained as a well defined sheet of laminar flow with minimal wind shear for reduced energy use in blowoff and cooling.

X-Stream™ Air Blade™ Air Knife is available in Thirteen (13) standard lengths in Regular Anodized Aluminum, Hard Anodized Aluminum and in Stainless Steel: 2" (51mm), 3" (76mm), 6" (150 mm), 9" (229 mm), 12" (305 mm), 15" (382 mm), 18" (457mm), 24" (610 mm), 30" (761mm), 36" (914mm), 42" (1067mm), 48" (1219 mm) and 54" (1372 mm).

# DIMENSION TABLE OF SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE – GOLD ANODIZED ALUMINUM

PART NO. (Gold Anodized Aluminum)	AA Inches (mm)	A Inches (mm)	B Inches (mm)	C Inches (mm)	No. of Rear Inlets (Side Inlets)
Model 10002X Gold Anodized Aluminum	2"(50.8)	N/A	N/A	1"(25.4)	1(0)
Model 10003X Gold Anodized Aluminum	3"(76.2)	.641"(16.3)	N/A	1.5"(38.1)	1(0)
Model 10006X Gold Anodiz	6"(152)	1"(25.4)	2"(50.8)	3"(76.2)	1(2)
Model 10009X Gold Anodized Aluminum	9"(228.6)	1"(25.4)	2"(50.8)	3"(76.2)	2(2)
Model 10012X Gold Anodized Aluminum	12"(304.8)	1"(25.4)	2"(50.8)	3"(76.2)	2(2)
Model 10015X Gold Anodized Aluminum	15"(381)	1"(25.4)	2"(50.8)	4"(101.6)	2(2)
Model 10018X Gold Anodized Aluminum	18"(457.2)	1"(25.4)	2"(50.8)	5"(127.0)	2(2)
Model 10024X Gold Anodized Aluminum	24"(609.6)	1"(25.4)	2"(50.8)	6"(152.4)	2(2)
Model 10030X Gold Anodized Aluminum	30"(762)	1"(25.4)	2"(50.8)	6"(152.4)	2(2)
Model 10036X Gold Anodized Aluminum	36"(914.4)	1"(25.4)	2"(50.8)	6"(152.4)	2(2)
Model 10042X Gold Anodized Aluminum	42"(1066.8)	1"(25.4)	2"(50.8)	6"(152.4)	2(2)
Model 10048X Gold Anodized Aluminum	48"(1219.2)	1"(25.4)	2"(50.8)	9"(228.6)	3(2)
Model 10054X Gold Anodized Aluminum	54"(1371.6)	1"(25.4)	2"(50.8)	9"(228.6)	3(2)

NOTE: For sizes 48" and longer there is a third rear inlet port in the middle, 1/4" NPT on same level as the other two rear inlet ports.

### **USE OF SHIMS:**

Nex Flow<sup>™</sup> uses **ONLY** stainless steel shims in their Air Knife products as plastic shims wear out over time and require replacement, even with relatively clean air systems. Stainless steel shims are .002" (.050 mm). In most applications this is adequate. However, velocity and force can be increased approximately 30% by adding a second .002" (.050 mm) shim. Shims may be stacked up to 5 sets. If using three or more sets however, the air inlets at the "ends" should be used to maintain even flow along the Air Knife system. Otherwise a slight drop in pressure and flow will occur across from the rear inlet ports if they are used with three or more shims. Note that noise levels and air use will go up with an increased number of shims.

### **MOUNTING:**

Mounting holes are provided for easy mounting of the Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup>. In addition, the holes at the bottom of the unit may also be used for mounting.

### **SPECIAL AIR KNIVES:**

Do you need a special length? Do you need a different shape or profile or material? Nex Flow™ can supply special units and address any unique situation. We have produced special lengths and made Air Knives in HDPE and other materials as requested.

### **ACCESSORIES:**

It is important to keep the air supply clean and dry. We recommend a water removal filter with a float type automatic drain with a minimum filtration of 5 micron. If there is a chance of oil in the lines, we suggest an oil removal filter as well with a minimum filtration of 0.3 micron, also with an automatic drain. To minimize air use, we recommend a regulator with gauge to set the minimum pressure necessary to operate the system. If the system can be turned on and off as necessary, we recommend a system such as our PLCFC System as described in Section A.

# AIR BLADETM AIR KNIFE

# HARD ANODIZED SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE

Blowoff, clean, cool and dry with this quietly in sticky, abrasive environments.

### WHAT ARE THEY - REASONS TO USE

The Hard Anodized version of the Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife is just as easy to mount and maintain, reducing both compressed air consumption and noise levels. It has the extra benefit of a protective coating that is more resistant to sticky material such as floating oils and has excellent resistance to abrasive action such as materials that could rub onto, or brush against the air knife in production. As with the regular anodized versions, it is still the most efficient design yet achieved in Air Knife blow off technology in reducing noise levels and air consumption yet providing the optimum in blow off energy.

The Hard Anodized Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife<sup>™</sup> produces a "laminar" flow of air along its length using the "Coanda" effect which "entrains" a large volume of air from the surrounding area along with a small amount of compressed air from the X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife to produce an output flow of up to 40 times.

System payback on compressed air savings can be as soon as a few weeks in some applications.

NOTE: Plastic shims can wear our quickly in Air Knives if the air is not clean. Nex Flow<sup>™</sup> uses ONLY stainless steel shims.

### HARD ANODIZED SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE **FEATURES:**

- No moving parts Gold Anodized aluminum, Hard Anodized aluminum or stainless steel.
- Compact design, simple, lightweight and portable.
- Full flow Air across entire length of Air Knife.
- Air inlets at ends and back.
- Driven by air not electricity.
- Replaces drilled pipe and open jets or nozzles used for blowoff, cleaning, drying and cooling.
- High airflow amplification.
- Instant on-off, no electricity or explosion hazard.

### HARD ANODIZED SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup>AIR KNIFE **BENEFITS:**

- Longer life in difficult environments than competitive models.
- Lower compressed air consumption than drilled pipe or rows of open jets and nozzles.
- Can be placed end to end for continuous airflow.
- Maintenance free with output easily controlled, safe to use.

### HARD ANODIZED SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE **ADVANTAGES OVER BLOWERS:**

- Compact design, simple, lightweight and portable.
- Driven by air, not electricity for safety.
- No moving parts Hence safer and maintenance free.
- Lower noise levels at 69 dBA and less with smaller space.

Just as we can provide special air knives made of different materials such as the HDPE plastic Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> shown, Nex Flow<sup>™</sup> can provide special coatings to address specific applications and environments.

### **USE OF SHIMS:**

Nex Flow<sup>™</sup> uses **ONLY** stainless steel shims in their Air Knife products as plastic shims wear out over time and require replacement, even with relatively clean air systems. Stainless steel shims are .002" (.050 mm). In most applications this is adequate. However, velocity and force can be increased approximately 30% by adding a second .002" (.050 mm) shim. Shims may be stacked up to 5 sets. If using three or more sets however, the air inlets at the "ends" should be used to maintain even flow along the Air Knife system. Otherwise a slight drop in pressure and flow will occur across from the rear inlet ports if they are used with three or more shims. Note that noise levels and air use will go up with an increased number of shims.

### **MOUNTING:**

Mounting holes are provided for easy mounting of the Silent X-Stream<sup>TM</sup> Air Blade<sup>TM</sup>. In addition, the holes at the bottom of the unit may also be used for mounting.

### **SPECIAL AIR KNIVES:**

Do you need a special length? Do you need a different shape or profile or material? Nex Flow<sup>™</sup> can supply special units and address any unique situation. We have produced special lengths and made Air Knives in HDPE and other materials as requested.

### **ACCESSORIES:**

It is important to keep the air supply clean and dry. We recommend a water removal filter with a float type automatic drain with a minimum filtration of 5 micron. If there is a chance of oil in the lines, we suggest an oil removal filter as well with a minimum filtration of 0.3 micron, also with an automatic drain. To minimize air use, we recommend a regulator with gauge to set the minimum pressure necessary to operate the system. If the system can be turned on and off as necessary, we recommend a system such as our PLCFC System as described in Section A.

# NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ AIR KNIFE VERSUS OTHER AIR KNIVES WITH STRAIGHT OUT BLOW OFF PROFILES

There are a few companies that produce compressed air operated air knives where the compressed air comes out straight as it does with the NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ air knife. However, the internals can be quite different ant it can make a big difference in performance.

Often air knife literature focus solely on compressed air consumption when in fact, it is not only the compressed air consumption which is important, but also the force produced. For the designs used by known air knife producers (where the compressed air comes out straight and entrains surrounding air similar in principle to the NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ design) the efficiency of blow off performance or FORCE/SCFM is essentially the same. What is important is the actual force needed for any particular application. However the NEX FLOW™ design will provide the same force and same air comsumption as most of these other designs but at a lower pressure.

Since it takes less energy to produce compressed air at a lower pressure than at a higher pressure the NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ design is actually the "MOST EFFICIENT" when these factors are taken into account. The difference is based on the internal design. The NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ design internally is the secret, minimizing the use of small air channels or anything that can cause restrictions and energy losses.

EXAMPLE: Here are actual measurements for the Nex Flow™ Model 10012X – X-Stream™ Air Blade™ Air knife and a Competitors equivalent.

### **NEXFLOW**

Inlet Pressure(PSIG)	10	20	30	40	50	60	70	80	90	100	110	120
Force (lb)	0.018	0.201	0.454	0.747	1.08	1.453	1.866	2.319	2.812	3.345	3.918	4.531
Flow (SCFM)	6.95	11.53	16.7	22.47	28.85	35.82	43.4	51.57	60.34	69.72	79.69	90.27

### COMPETITOR

001111 E111 OI1												
Inlet Pressure(PSIG)	10	20	30	40	50	60	70	80	90	100	110	120
Force (lb)	0.01	0.14	0.31	0.51	0.74	1.00	1.28	1.59	1.93	2.3	2.69	3.11
Flow (SCFM)	5.11	8.48	12.28	16.52	21.22	26.34	31.92	37.92	44.37	51.27	58.6	66.38

If you take the Nex Flow™ figures at 80 PSIG (IN BLUE) you see that they compare well to the competitors figures at 100 PSIG (IN RED). Efficiency as to FORCE/UNIT OF AIR USE OR SCFM is virtually identical. However Nex Flow™ can produce the force required at 20 PSI "LOWER" pressure. It is well known that reducing pressure even by 10% PSIG can save as much energy as 5% on a compressor. REPLACING EVEN A COMPETITORS' AIR KNIFE MAY SAVE 10% or more jsut because you can run at lower pressure for the same application!!!! A SIGNIFICANT SAVING!!!

In any application, you would adjust the pressure as low as possible to perform the desired application. Put side by side a competitor's air knife, just by being able to use it at lower pressure, ant to be able to run your systems at a lower pressure, can save significant cost.

# SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE

Velocity is important in that it can determine the cooling effect and is also related to the blowoff force. Velocity will vary significantly depending on the temperature of the ambient air - The hotter the air, the greater the velocity (and the greater the amplification of the air flow). So velocity figures at best are an approximation. As air is entrained, the flow increases and as the flow increases the velocity must come down. The velocity at the exit of the Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife is the highest but the figure is of no value as once the surrounding air is entrained, the velocity drops dramatically. (Be wary of extremely high velocity claims downstream of any Air Knife or Air Amplifier). The figures provided by Nex Flow<sup>™</sup> can be verified with a velocity meter. There will be some variations in measurement due to different air pressure and atmospheric conditions. The velocity is, among other things, dependent on the chamber pressure. That pressure in turn depends upon pipe size, pressure drops in the system, distance from the compressor station to the point of use, and many other factors.

### **ACCESSORIES**

It is important to keep the air supply clean and dry. We recommend a water removal filter with a float type automatic drain with a minimum filtration of 5 micron. If there is a chance of oil in the lines, we suggest an oil removal filter as well with a minimum filtration of 0.3 micron, also with an automatic drain.

To minimize air use, we recommend a regulator with gauge to set the minimum pressure necessary to operate the system. If the system can be turned on and off as necessary, we recommend a system such as our PLCFC System as described in Section A.

## OPTIONAL SILENT X-STREAM<sup>™</sup> AIR BLADE<sup>™</sup> AIR KNIFE COUPLING KIT.

This one piece kit c/w 10 stainless steel screws connects any two Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife of 6" or larger together to make a longer blowoff system to cover greater distances. The units come in three models. Model 10900X gold anodized aluminum for the gold anodized aluminum Silent X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knives, Model 10900XHA for the Hard Anodized units, and Model 10900XS stainless for stainless steel models.

### **CALCULATING AIR SAVINGS**

To obtain the air consumption of drilled holes in pipe, determine the size of the holes and multiply the air loss by the number of holes over the length. The air consumption of the X-stream air blade air knife is read off the performance tables.

### **EXAMPLE:**

Assume an existing blowoff of a 24" long pipe with 3/32" holes spaced equally apart for a total of 32 holes. At 80 PSIG, from the graph, each hole consumes about 9.4 SCFM for a total of 32 X 9.4 = 300.8 SCFM.

At 80 PSIG, a 24" X-stream air blade air knife consumes 80 SCFM (from the performance chart). Compressed air saved is 300.8 - 80 = 220.8 SCFM.

Using actual air costs if known (or assuming a reasonable cost of \$0.30 US per 1000 cubic feet) the dollars saved is  $220.8 \times 60 \times 0.30/1000 = $3.97 \text{ per hour or assuming a } 2000$ hour working year = \$7940.00 US funds saved annually.

Please refer to the Addendum on the explanation of Air Flow Amplification for a detailed explanation on what it is and how air amplification works.

# STANDARD AIR BLADE™ AIR KNIFE

Blowoff, clean, cool and dry with a strong curtain of amplified airflow.

### WHAT ARE THEY - REASONS TO USE

Standard Air Blade™ Air Knife Blowoff System from Nex Flow™ is easy to mount and maintain, reducing both compressed air consumption and noise levels.

The Standard Air Blade™ Air Knife Blowoff System produces a "Laminar" flow of air along its length using the "Coanda" effect which "entrains" a large volume of air from the surrounding area along with the small amount of compressed air from the Air Blade™ Air knife to produce an output flow up to 30 times. System payback on compressed air savings can be as soon as a few weeks in some applications. It is less costly than the highly efficient and quiet Silent Air Blade™ Air Knife but it is popular for more heavy duty installations due to its greater bulk. In addition, it is excellent for some applications when mounted flush to a flat surface to create an extended air barrier along that surface. Normally the X-Stream™ version is most efficient although the Standard would be lowest initial cost.

Mounting and holding systems are available for the Standard Air Blade Air Knife. Fully flexible positioning

**See Accessories** 

A Model 10018 Standard Air Blade™ Air Knife is used to blow scrap pieces and dirt from cellular phone parts after machining.

### STANDARD AIR BLADE™ AIR KNIFE FEATURES:

- No moving parts anodized aluminum or stainless steel
- Compact design, simple, lightweight and portable
- Rugged design
- Full flow air across entire length of Air Knife
- Air inlets at ends and back
- Driven by air not electricity
- Replaces drilled pipe and open jets or nozzles used for blowoff, cleaning, drying and cooling
- ▶ High airflow amplification
- Instant on-off, no electricity or explosion hazard

### STANDARD AIR BLADE™ AIR KNIFE BENEFITS:

- Longer life in difficult environments than competitive models
- Lower compressed air consumption than drilled pipe or rows of open jets and nozzles.
- Can be placed end to end for continuous airflow.
- Maintenance free with output easily controlled, safe to use.

**NOTE:** Plastic shims can wear out quickly in Air Knives if the air is not clean. Nex Flow™ uses only stainless steel shims.

### STANDARD AIR BLADE™ AIR KNIFE - HOW IT WORKS:

Standard Air Blade™ Air Knife - Compressed air enters the Air Knife at the rear (or end) ports at (A). Air is entrained at point (B) by the compressed air stream that leaves the Air Knife from a small gap. The entrained air follows the "Coanda" profile along the front face (C) that directs the air flow in a perfect straight line at 90 degrees to create a uniform sheet of air along the entire length of the Air Blade ™ Air Knife. As the air leaves the Air Knife at point (D) the amplified air stream maximizes velocity and force is maximized as a well-defined sheet of laminar flow with minimal wind shear for reduced energy use in blowoff and cooling.

Standard Air Blade™ Air Knife is available in eight standard lengths in anodized aluminum and in seven lengths in stainless steel: 3" (76 mm), 6" (150 mm), 8" (203.2 mm) (not available in stainless), 12" (300 mm), 18" (457 mm), 24" (609.5 mm), 30" (761 mm), 36" (914 mm)

(\* BSP Threads or Adaptors can be supplied depending on country location)

### NOTE:

The performance of the X-Stream<sup>™</sup> Air Blade<sup>™</sup> Air Knife and the Standard Air Blade<sup>™</sup> Air Knife will be relatively the same given "same" internal chamber conditions. However, due to design the X-Stream<sup>™</sup> Air Blade<sup>™</sup> will use about 15% "LESS" compressed air. This generally means less air line pressure drop and "higher" chamber pressures in an X-Stream<sup>™</sup> Air Blade<sup>™</sup> given the same application and therefore superior performance (as well as lower noise levels). The Standard Air Blade<sup>™</sup> Air Knife however is lower cost has applications suited to its unique design.

A Model 10003 3" Standard Air Blade<sup>™</sup> Air Knife is mounted such that the surface of the Air Knife is flush with the surface of a camera lens. The air flows along the surface of the Air Knife and continues along the lens due to a boundary later effect that provides a laminar "barrier" to the dirty environmental air, keeping the lens clean and dry.

Two Model 10012 Standard Air Blade  $^{\mathsf{TM}}$  Air Knives are installed on a duct (One on top, One on bottom) to draw in waste fumes & exhaust. The air leaving the Air Knives hug the inside wall creating an excellent vacuum inside the duct.

AIR BLADET AIR KNIFE

Velocity is important in that it can determine the cooling effect and to some extent is related to the blowoff force. Velocity will vary significantly depending on the temperature of the ambient air the hotter the air, the greater the velocity (and the greater the amplification of air flow) so velocity figures at best are an approximation. As air is entrained, the flow increases and as the flow increases the velocity must come down.

The velocity at the exit of the Standard Air Blade<sup>™</sup> Air Knife is obviously the highest but the figure is of no real value as once the surrounding air is entrained, the velocity drops dramatically. (Be very varying of extremely high velocity claims downstream of any Air Knife). The figures we provide can be verified with a velocity meter. There will be variations in measurement due to air pressure, and atmospheric conditions. The velocity is, among these other things dependent on the chamber pressure. That pressure in turn depends upon pipe size, pressure drops in the system, distance from the compressor station to the use point, and many other factors.

### **CALCULATING AIR SAVINGS**

To obtain the air consumption of drilled holes in pipe, determine the size of the holes and multiply the air loss by the number of holes over the length. The air consumption of the stndard air blade air knife is read off the performance tables.

### **EXAMPLE:**

Assume an existing blowoff of a 30" long pipe with 3/32" holes spaced equally apart for a total of 40 holes. At 80 PSIG, from the graph, each hole consumes about 9.4 SCFM for a total of 40 X 9.4 = 376 SCFM.

At 80 PSIG, a 30" standard air blade air knife consumes 61 SCFM (from the performance chart). Compressed air saved is 376 - 61 = 315 SCFM.

Using actual air costs if known (or assuming a reasonable cost of 0.30 US per 1000 cubic feet) the dollars saved is 315 X 60 X 0.30/1000 = 5.67 per hour or assuming a 2000 hour working year = 11340.00 US funds saved annually.

10006S	6" Stainless Steel Standard Full-Flow Air Blade™ Only
10012S	12" Stainless Steel Standard Full-Flow Air Blade™ Only
10018S	18" Stainless Steel Standard Full-Flow Air Blade <sup>™</sup> Only
10024S	24" Stainless Steel Standard Full-Flow Air Blade™ Only
10030S	30" Stainless Steel Standard Full-Flow Air Blade™ Only
10036S	36" Stainless Steel Standard Full-Flow Air Blade™ Only
11003S	3" Stainless Steel Standard Full-Flow Air Blade™ plus Filter with Auto Drain
11006S	6" Stainless Steel Standard Full-Flow Air Blade™ plus Filter with Auto Drain
11012S	12" Stainless Steel Standard Full-Flow Air Blade™ plus Filter with Auto Drain
11018S	18" Stainless Steel Standard Full-Flow Air Blade™ plus Filter with Auto Drain
11024S	24" Stainless Steel Standard Full-Flow Air Blade™ plus Filter with Auto Drain
11030S	30" Stainless Steel Standard Full-Flow Air Blade <sup>™</sup> plus Filter with Auto Drain
11036S	36" Stainless Steel Standard Full-Flow Air Blade™ plus Filter with Auto Drain
12003S	3" Stainless Steel Standard Full-Flow Air Blade™ + Filter with Auto Drain + Regulator with gauge
12006S	6" Stainless Steel Standard Full-Flow Air Blade™ + Filter with Auto Drain + Regulator
12012S	12" Stainless Steel Standard Full-Flow Air Blade™ + Filter with Auto Drain + Regulator with gauge
12018S	18" Stainless Steel Standard Full-Flow Air Blade™ + Filter with Auto Drain + Regulator with gauge
12024S	24" Stainless Steel Standard Full-Flow Air Blade <sup>™</sup> + Filter with Auto Drain + Regulator with gauge
12030S	30" Stainless Steel Standard Full-Flow Air Blade™ + Filter with Auto Drain + Regulator with gauge
12036S	36" Stainless Steel Standard Full-Flow Air Blade <sup>™</sup> + Filter with Auto Drain + Regulator with gauge

### Extra Stainless Steel Shims for Standard Air Blade<sup>™</sup> Air Knife (.002" or .050 mm Thick)

PART NO.	DESCRIPTION
10103S	3" Stainless Steel Shim
10106S	6" Stainless Steel Shim
10112S	12" Stainless Steel Shim
10118S	18" Stainless Steel Shim

DESCRIPTION
24" Stainless Steel Shim
30" Stainless Steel Shim
36" Stainless Steel Shim

**NOTE:** Plastic shims can wear out quickly in Air Knives if the air is not clean. Nex Flow<sup>™</sup> uses ONLY stainless steel shims.
